The Cereal YEN was established in 2012, and is the longest-running Yield Enhancement Network.

By joining the Cereal YEN, you will be able to benchmark your crops performance against other members, attend workshops with experienced farmers, agronomists and scientists, and be eligible for the YEN Awards at the annual conference, held in November.

All members will be provided with a comprehensive report, detailing how their crop performed and where improvements could be made.

I’m thinking of growing wheat continuously – what is the likely yield penalty?

22 August 2021 by Bob Parsons

Our experience has been continuous wheat yielding a good 1 t/ha below second wheats

27 August 2021 by Mark Ramsden

Where can I find out about X / Who has done experiments with Y?

28 August 2021 by Christina Baxter

I can point you to some very good resources if you can make your question a little bit more specific, for example you might want to blah blah blah?
